PROFESSIONAL SUMMARY

Data Scientist with 5+ years of experience delivering production ML and deep learning systems, from data ingestion through Dockerised deployment and SLA-driven monitoring. Specialises in reducing technical debt, contributing to research and proofs of concept for the team, and running models in production with drift detection and feedback loops. Coordinates cross-functional teams, provides effective feedback and moderates technical discussions. Currently upskilling in agentic AI and spec-driven development.

EXPERIENCE

Data Scientist

November 2019 to Present

Homiwoo, Paris, France

- Contributed to an internal Computer Vision Innovation project covering pair image matching, image segmentation, and multi-class classification and identification, deployed behind a Gradio UI for stakeholder exploration.
- Shipped a subsidiary-housing classifier that infers subsidy type directly from real-estate advertisements, enabling investors to qualify listings instantly. Owned training, benchmarking, SLA validation and in-production monitoring.
- Replaced legacy rule-based expert-system heuristics with ML models. Ran side-by-side consistency and robustness tests to guarantee behavioural parity before cutover.
- R&D in computer vision: classification and identification models over real-estate imagery. Built Gradio user interfaces so non-technical stakeholders could probe model predictions directly.
- Built cross-source data matching: record linkage across heterogeneous external datasets.
- Owned the full model lifecycle: pipeline data ingestion, training and validation, MLflow experiment tracking and benchmarking, Dockerised production serving, data-drift monitoring, SLA validation and closed-loop feedback.

Technologies: Python, Scala, PyTorch, Keras, Scikit-learn, NumPy, Pandas, MLflow, BentoML, Docker, Gradio, Git, Jupyter.

Senior Software Engineer

September 2014 to November 2016

Capgemini, Bengaluru, India

- Delivered web application development and backend programming for enterprise clients.
- Contributed across the full delivery cycle: design, coding, testing and deployment in Java and JavaScript environments.

EDUCATION

Master of Science in Informatics

September 2017 to July 2019

ENSIMAG, Grenoble INP, France

Bachelor of Engineering in Computer Science

June 2010 to June 2014

Visvesvaraya Technological University, Bengaluru, India

TECHNICAL SKILLS

Programming Languages: Python, Scala, Java

Machine Learning, Deep Learning and Data Science: PyTorch, Keras, Scikit-learn, TensorFlow, NumPy, Pandas, Statistics, Data Visualization

MLOps and Deployment: MLflow, BentoML, Docker, Gradio

Computer Vision: Image matching, Segmentation, Classification, Image identification, Watermark detection, Vectorization, Camera parameter estimation

Tools and Platforms: Git, Unix, Jupyter Notebook, Gerrit

Learning and Development: Agentic AI development, Spec-driven development, LLM applications

Leadership and Collaboration: Team coordination, Cross-functional collaboration, Technical mentorship, Stakeholder communication, Research and Proof-of-concept leadership

PROJECTS

Reproducibility of Deep Learning Experiments on GPU

February 2018 to June 2018

Laboratoire d'Informatique de Grenoble

Evaluated the statistical significance of performance differences across neural architectures and training strategies on CIFAR-10 and CIFAR-100 classification tasks.

DNA Binding Site Prediction for Transcription Factors

December 2018 to January 2019

ENSIMAG, Grenoble INP

Adapted Logistic Regression and Support Vector Machine classifiers to structural genomic data to predict transcription-factor binding regions.

CERTIFICATIONS

- Neural Networks and Deep Learning - Coursera, deeplearning.ai
- Microsoft Specialist: Programming in HTML5 with JavaScript and CSS3
- Microsoft Student Partner - Microsoft India (December 2013 - July 2014)

LANGUAGES

- English - Fluent
- French - B1, intermediate
- Kannada - Native
